With Easy Steps Guide

The simplest way to repair is to use a capacitor because you can get a quick high voltage discharge from them. The most common capacitor used is from a disposable camera. Charge the capacitor to a voltage which is approximately 2-4 times the voltage of the cell. Now connect the battery to the capacitor with

History. The first Ni-Cd battery was created by Waldemar Jungner of Sweden in 1899. At that time, the only direct competitor was the lead-acid battery, which was less physically and chemically robust. With minor improvements to the first prototypes, energy density rapidly increased to about half of that of primary batteries, and significantly
