All modern solid-state TV sets have a standby power supply and main power supply circuit. The standby supply will provide the voltage needed to run the microprocessor IC in the TV set. This consists of a low voltage power transformer feeding one or more sets of rectifiers, filter capacitors, and possibly regulators.

In the late 60s color sets became more reliable and cheaper, and more network TV shows were televised in color, so color sales accelerated. Another factor that helped color set sales was the popularity of the Disney show The Wonderful World of Color , which began in 1961. 1970 was the first year that color set sales exceeded black and white.
